Job Title: Network Engineer

Company: Meta

Location: Menlo Park, CA

About the Role:

Meta's infrastructure team is looking for a skilled Network Engineer to help design and maintain the backbone of the company's global connectivity. You'll be working on data centers, network automation, and high-availability systems.

Responsibilities:

- Design and deploy LAN, WAN, and wireless networks.

- Troubleshoot network outages and performance issues.

- Implement security best practices and ensure compliance.

- Collaborate with data center and cloud infrastructure teams.

Minimum Qualifications:

- Bachelor's in Computer Engineering, Information Technology, or related field.

- 3+ years of experience in enterprise networking.

- Strong understanding of TCP/IP, routing, switching, and firewalls.

- Hands-on with Cisco, Juniper, or Arista hardware.

Preferred Qualifications:

- CCNA/CCNP or similar certification.

- Familiarity with SDN and network automation (Python, Ansible).

- Experience in large-scale, multi-site environments.
